The Port of Nagoya's Participation in the ESI Program and Enhancement of its Green Award Program

Enhancement of incentives for environmentally friendly vessels

In the Carbon Neutral Port (CNP) Creation Plan of Nagoya Port, announced on March 15, the Port of Nagoya included “Enhancement of incentives for environmentally friendly vessels” as a measure to improve the competitiveness of the port and its industrial location.

Specifically, the following enhancements will be made from April 1, 2023.

1 Participation in the ESI Program

The Nagoya Port Authority will participate in the IAPH's ESI Program, which aims to reduce air pollutant emissions from vessels, and introduce a new incentive to reduce port dues by 15% for ocean-going vessels with an ESI value of 30 or higher entering the Port of Nagoya.

2 Enhancement of contents of the Green Award Program

In the incentive program that reduces port dues for vessels certified under the Green Award Program, which has been in place since 2008, the discount will be increased from 10% to 15%.

NOTE: In cases when both incentive eligibility conditions apply, only one can be used (they cannot be combined).

For details on the Port of Nagoya's incentives, please refer to the following URL.
